*If you have concerns about any the above-mentioned conditions, feel free to ask questions.*

### POTENTIAL RISKS AND COMPLICATIONS

A chemical peel is among the safest skin rejuvenation procedures. However, this aesthetic procedure is not an exact science, and the degree of improvement can vary from person to person. I understand that, although I may notice a change after my first treatment, three to five sessions may be required to achieve the desired results.

I have been warned that, although complications resulting from a Pro-Derm peel are rare, they are possible, and the nature of these complications cannot be accurately predicted. Consequently, there is no guarantee, expressed or implied, that the treatment will have a successful outcome. Infections caused by bacterial contamination can occur if the post-peeling instructions are not followed.

The procedure and side effects, including other methods, and the advantages and disadvantages, have been explained to me.

I know that the results following a peel are not permanent and that the skin will deteriorate naturally over time.

This consent form is valid for five Pro-Derm peels, after which I may have to fill out a new form. I declare that I have read the information (or that the information has been read to me) and that I understand the consent form and its contents.

I have had the opportunity to ask questions about the procedure, including the risks and other methods, and I acknowledge that all of my questions about the procedure have been answered in a satisfactory manner.

**This consent form is valid until it is revoked in writing, in full or in part, by me.**

I consent to have \_\_\_\_\_ perform a Pro-Derm peel.
